

Subject: **Communication Networking Settings**

Revision History

Version 1.0 - April 2024 - Initial release

Applicable products and models

EESOLAR Inverters

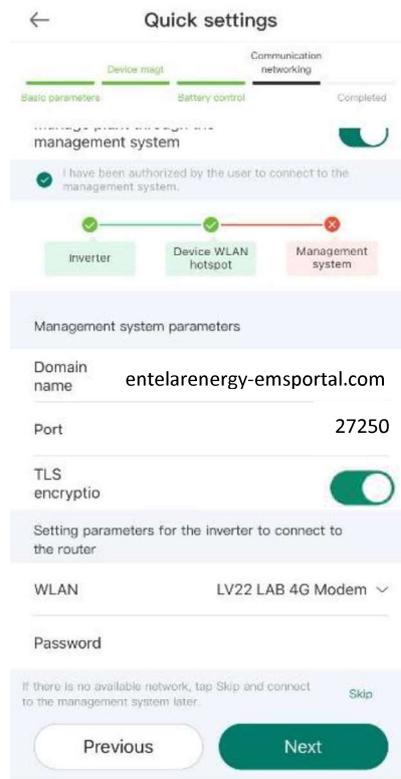

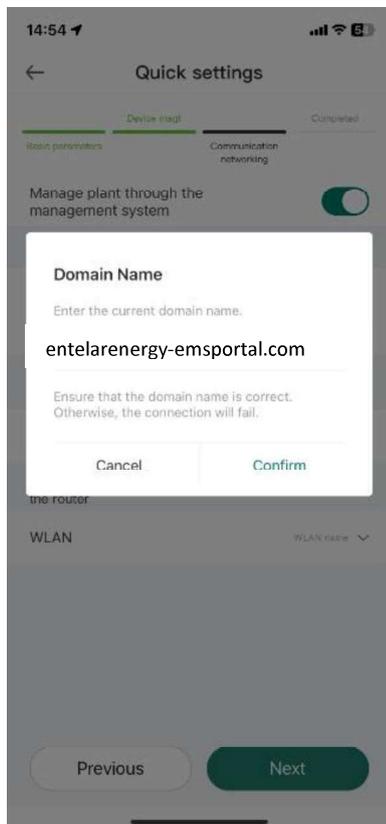

Entelar Energy continuously strive to improve installer and customer experience of our App, products, solutions and services.

We have received initial installer feedback to better clarify the Domain Name information in the HiSolar App.

To facilitating ease of commissioning, we will implement the default domain name to 'entelarenergy-emsportal.com'. However, do note that the earlier domain name '20.199.96.147' is still applicable. For all new install, please follow the steps below during 'Communication Networking' step on HiSolar for the following install scenario(s).

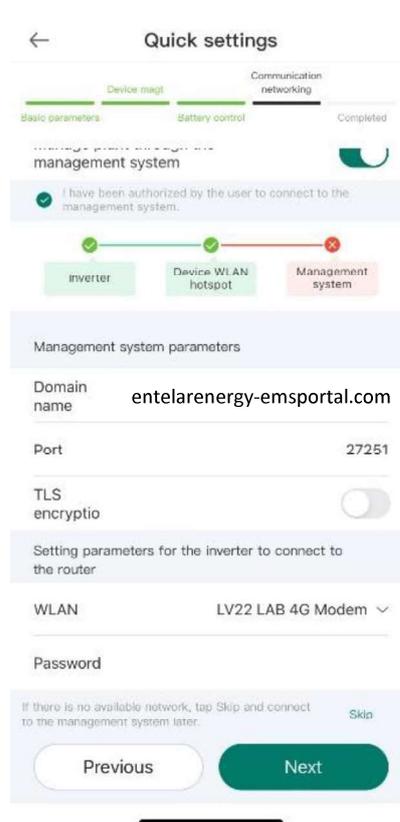

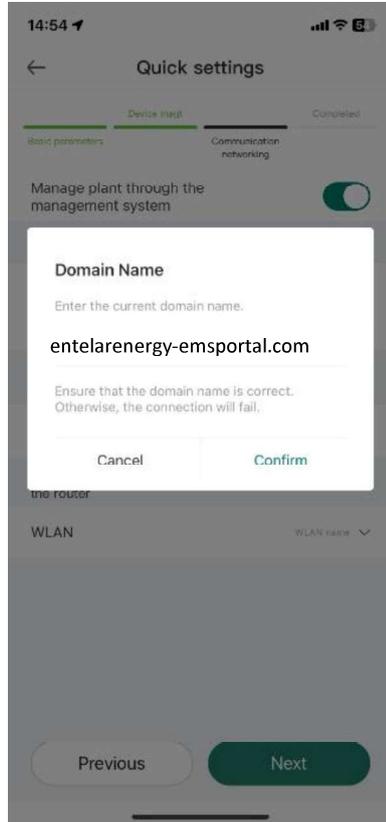

Scenario 1: **With EEDongleA-05**

- Domain Name: **entelarenergy-emsportal.com** or **20.199.96.147**
- Port Number: **27250**
- TLS Encryption: **Enabled**

Scenario 2: Without EEDongleA-05

- Domain Name: entelarenergy-emsportal.com or 20.199.96.147
- Port Number: 27251
- TLS Encryption: Disabled
